Borrow tUSDC with **$0 of your own**, buy MAX on the cheap DEX, sell on the dear DEX, repay — **all in one transaction**. Profit goes to the bot's owner. Over-borrow → the whole tx reverts.

DEX-cheap (buy MAX)	DEX-dear (sell MAX)
1950.00	2050.00
1,000 MAX / 1,950,000 tUSDC	1,000 MAX / 2,050,000 tUSDC

price gap **5.13%** · lender liquidity **5,000,011** tUSDC

Flash-borrow amount (tUSDC) fee 0.05%

20000

MAX bought (cheap)	tUSDC back (dear)	Must repay	Est. profit
10.1221 MAX	20,481	20,010	+471

✓ profitable — the tx will succeed and send **+471 tUSDC** profit to the bot owner

Run flash-loan arb (1 transaction)

Bot owner (CSTU) profit wallet

5,056,524.35 tUSDC (0x6c57…24ec)

💡 **Zero capital, atomic.** The bot never holds the borrowed tUSDC beyond one tx: borrow → buy → sell → repay happen inside a single call. Repay covered → profit kept; not covered → **the entire tx reverts**, you lose only gas. No collateral, no liquidation — there is no position to seize. **Borrow too much and your own trades flatten the 5% gap** (price impact) → revert. Watch it on the explorer: one tx, the whole borrow→arb→repay chain inside.
